Can you afford not to choose Hiab?

HIAB truck cranes stand head and shoulders above the rest for design innovation, engineering excellence and outstanding performance. But can you afford the best in the world? The answer is 'yes'.

There may be cheaper cranes on the market, but in the long run HIAB truck cranes actually cost you less. That's because HIAB cranes are built to last. Control valves, hydraulics, electrics and all other key systems have been developed to perform efficiently and reliably for the whole life of the crane. And every single model is designed for quick, easy and minimal servicing. You see the benefit in lower operating costs year after year, after year.

And that's not all. HIAB cranes contribute to the profitability of your business by giving you higher load cycling speeds and greater productivity, whatever the size of crane you operate. Our new, pioneering XS range for example, utilises advanced modular manufacturing techniques to give you more features, more capacity, more outreach and more precision than any other cranes in their class.

If you want the best truck crane money can buy for exceptional performance, maximum reliability and lower lifetime operating costs, it has to be a HIAB.

Anything less is false economy.

HIAB
