

## THE INDUSTRY-LEADING SOLUTION FOR SMALL SET-UP AREAS

**TC89AJplus**

### NEW TO CONEXPO: ALTEC TEUPEN EQUIPMENT

For the first time at ConExpo, Altec will exhibit Altec Teupen equipment. Attendees can visit Altec at booth F44042 to see the Altec Teupen TL127AJplus, a spider lift that features a 127-foot articulating and telescopic boom and an 882-pound platform capacity. This unit offers rapid point to point access for the most difficult to reach applications. The Altec Teupen TC89AJplus will also be displayed. This spider lift represents the next generation of standard features for future Altec Teupen models. It features an 89-foot articulating and telescopic boom with a newly designed high performance boom system that provides smooth boom operation and stability aloft.

**Telehandlers are well represented this year, with a good combination of North American and European manufacturers, along with new entrants from China.**

For those who might not be in the know, the North American market tends to prefer a high boom, more rugged and basic product when it comes to medium to large, fixed frame models. These are now bracketed by European-style compact models and big 360 degree telehandlers. Add to this a couple of new quad track machines, and there is plenty to see for those interested in this type of machine.

In 2023, **Xtreme Manufacturing** dazzled with the monster 50,000lbs/100ft (22,500kg/30.5m)

Trackzilla XR50100-G quad track machine with 16.6 metres/55ft of forward reach. This year it will show two Trackzillas alongside the ultra heavy duty 70,000lb/38ft (31,500kg/11.5m) XR7038-F, plus its first all-electric model, the 40,000lb/30ft (18 tonne/9m) XR4030-E.

Staying with quad tracks, **JLG** will show a more mainstream 10,000lbs/43ft (4,500kg/13.2 metre) 1043T, while Xtreme's Trackzillas are in production JLG says its new machine is a concept model, and is therefore looking for your input and feedback.

**Magni** is a stand not to miss, the company has a habit of surprise unveilings of new record-breaking

models at the show. This year it has at least four chunky new models - two 8,000kg/17,500lb capacity 360 degree units, the 35m/115ft RTH 8.35 and 39m/129ft RTH 8.39TC. In terms of fixed frame models, it has launched two 4,000kg/8,800lb units, the 15 metre/50ft TH4.15TC and 19m/63ft.

**Sennebogen** has not confirmed whether it will display one of its heavy duty telehandlers or not, but it is worth a look just in case.

**Sinoboom** has big plans for the telehandler market and has been working on both fixed frame and 360 degree models, the fruits of which it will have on display.

**Skyjack** has not said which models it will have on its Conexpo stand apart from the 10,000lb/56ft (4,500kg/17m) SJ1056TH, but look out for its compact North American SJ519 TH.

**LGMG** is another Chinese aerial lift manufacturer looking to gain a foothold in the telehandler market. It will show the new 12,000lb/56ft (5,400kg/17m) H1256 with 42ft/12.7m of

forward reach. It might also have its new 69ft /11,000lb (5,000kg/21m) 360 degree HR2150 on show.

In 2023, **Sany** showed a full range of its North American telehandlers which were built in China and with plans to start production in Germany. It will be interesting to see where it is building them now. There should certainly be plenty to see.

At recent exhibitions, **Bobcat** has displayed innovative new tech, and may well do so here in the USA, so worth walking by for a look.

**Manitou** will exhibit its latest products, but for many, it will also be the first opportunity to meet the company's new president for North America, Brad Boehler, in his new role.
