

Promote and enable the safe, effective use of powered access worldwide

TIME TO UPSKILL?

IPAF offers more than 40 training courses for different machine categories including mobile elevating work platforms (**MEWP**), mast climbing work platforms (**MCWP**) and construction hoists (**CH**).

Whether you're a site manager, health & safety professional, engineer, planner, specialist, experienced operator, or absolute beginner, IPAF has a course for you.

IPAF training helps keep employees safe and employers legally compliant, while the globally recognized IPAF PAL Card proves operators have been trained to the highest standard.

Many courses can be taken solely or partly online as eLearning, in a matter of hours, providing flexibility to fit training in easily around your schedule.

OVER 3 MILLION PAL CARDS HAVE BEEN ISSUED WORLDWIDE

IPAF to showcase Safety, Training and Innovation

IPAF, the International Powered Access Federation, can be found on a stand in the Grand Lobby area of the exhibition centre. This year, its focus will be on the importance of training before using or working with aerial work platforms or mast climbing work platforms, in order to help ensure safety and efficiency. Although it welcomes all visitors who have an interest in working at height.

IPAF experts will be on hand to highlight a range of initiatives designed to help contractors, rental companies, supervisors and operators improve productivity while reducing risks on jobsites in North America. Visitors to the stand can benefit from actionable guidance, practical tools, and training resources that can be applied in everyday aerial lift operations.

IPAF's core themes for the show include:

- eLearning: Accessible, Affordable and A92.24-Compliant Training. Attendees can learn more about IPAF's enhanced training curriculum, which supports ANSI/SAIA A92.24 requirements and is designed to remove traditional barriers to training.

- Roadways Safety Campaign: IPAF North America's latest safety campaign is titled 'How to Stay Safe on or Near Roadways', aimed at reducing the growing number of vehicle related incidents involving aerial work platforms.

- Digital Innovation: IPAF will deliver live demonstrations of its ePAL app, which provides digital PAL Cards, operator logbooks, training records, and access to safety guidance. The app is designed to help companies streamline training verification, improve record-keeping, and ensure that only trained operators are using platforms on site.

- Advancing Safe Aerial Work Platform Use Together: IPAF will also engage with attendees interested in joining IPAF North America and becoming part of a growing community committed to advancing safe and effective platform use across the industry.

IPAF North America regional manager Tony Groat said: "I am looking forward to hosting a seminar at the event on March 5th entitled 'Smart

MEWP Selection: The Accessories That Take Safety Further'. It's not just about picking the right lift, it's about equipping it for safety and efficiency. After selecting the correct platform, one must focus on the many accessories and options available in today's market, many of which can influence or even change your final equipment choice."

"Safety and productivity are not opposites - they are partners"

"The message I hope attendees take away from Conexpo 2026 is simple: safety and productivity are not opposites, they are partners. I hope people leave with a stronger understanding of how to select the right MEWP and the knowledge and tools needed to complete work safely and efficiently."

IPAF invites all attendees to visit our booth - GL31205 in the Grand Lobby - to connect with the

IPAF team, explore training and safety resources, and learn how IPAF continues to support safer, more productive powered access operations across the industry.

IPAF is a not for profit organisation owned by its members, which include manufacturers, rental companies, distributors, contractors and all manner of powered access users. IPAF has members in more than 80 countries, and members include the majority of the worldwide aerial rental fleet operators and manufacturers who produce more than 85 percent of all of the platforms on the market.
